

MapToLearn

Creating student success, one map at a time

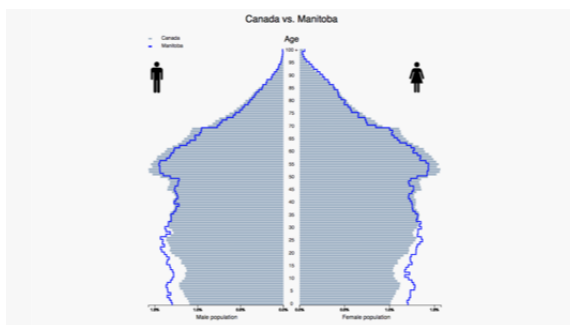

Newsletter - Vol. 2, No. 7, May 22, 2018

2016 Census

Statistics Canada has now been reporting data on the 2016 Census since February 2017. With every update the Canadian public has access to more and more information about themselves, their location, province and country.

The [Census Program](#) website allows you to browse this data in many pre-packaged tables, graphs, infographics, videos and thematic maps. This would be an excellent starting point for students to learn about previous and the current Census.

Creating Census Data Maps

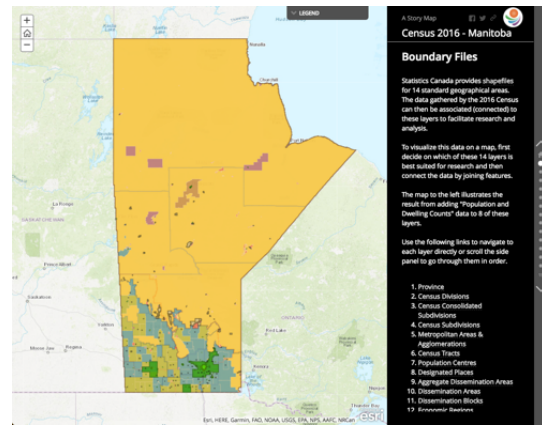

One of the great benefits to students and teachers is the availability of this raw data in geospatial form. That is, maps can be drawn for further insight on any

topic at various geographic levels, all the way from the smallest census dissemination blocks to all of Canada.

In order to use this data for maps, MapToLearn has created a Story Map which will help you get started.

The first in this series is "[Census 2016 - Manitoba](#)". It explains the

different geographic levels for which data is available and provides you with an example of "[Population & Dwelling Counts](#)" map for Manitoba.
